

TrueType

```
classDiagram
    class TrueType
    class ros_message_traits["ros::message_traits"]
    TrueType --|> ros_message_traits
```

The diagram shows a class hierarchy. At the top is a box labeled 'TrueType' with two empty compartments below the name. Below it is a larger box with a grey background, representing the base class 'ros::message\_traits'. This box has three compartments: the top one contains the text 'ros::message\_traits', '::IsMessage< ::conti', and '\_radar::Measurement\_ < ContainerAllocator > >', while the two bottom compartments are empty. A blue arrow with an open triangular head points from the top of the 'ros::message\_traits' box to the bottom of the 'TrueType' box, indicating inheritance.

ros::message\_traits  
::IsMessage< ::conti  
\_radar::Measurement\_  
< ContainerAllocator > >
